Tuple challenge

Retrieving n-th element from a tuple created from a string

Given a string of integers separated by commas, convert the string into a tuple where each element is one of the integers from the string. Retrieve the n-th element from the tuple you created. Use 0-based indexing for getting the n-th element. First line of the input contains the string of integers and the second line contains the index 'n'. Write a program to scan these two lines as input, and print the n-th element from the tuple you created.

Sample Input 1:

```
In [ ]:   2,3,5,7,11
          3
```

Sample Output 1:

```
In [ ]:   7
```

Sample Input 2:

```
In [ ]:   31
```
